Dave – Thank you for getting back to me. The additional sampling data was previously provided by Elaine, but having the full report will be helpful. And your hold on the schedule for work in this area is understood.

If you could, however, provide some specifics, particularly in regards to those items (bullets) I have highlighted below, that would be extremely helpful as we go through evaluating the various remedial alternatives.

My apologies for pestering you, but MassDEP has provided a short window within which to revise the feasibility study, and I would like to have some specific information about EPA's plans to work from if at all possible.

Thanks,
Marilyn

Subject: RE: NBH/Aerovox Questions-

Hello Marilyn - thank you for checking in regarding EPA's harbor cleanup efforts near the Aerovox property. At this point, however, our dredging/removal plans for the abutting area seaward of the Aerovox property are on hold, pending achievement of full source control at Aerovox. We remain concerned that removal of contaminated sediments or NAPL in this abutting area at this point in time, prior to full source control at Aerovox, would result in recontamination from Aerovox of the Harbor, including the area along the Aerovox shoreline. We are continuing with certain harbor cleanup efforts further afield from Aerovox, but, again, we are refraining at this time from any sediment removal activity immediately adjacent to Aerovox until EPA is satisfied that full source control at the Aerovox property is achieved.

You also asked about mapping the extent of DNAPL and contaminated sediment material under the river: we are in the process of finalizing a technical memo that will include our sampling efforts to date, and we will share that report with you once its finalized. We are also considering whether additional borings or additional field work is warranted in the river to better understand the extent and impacts of the DNAPL under the river. We will also keep you informed of any developments in this regard, and whether land access along the shore at Aerovox would be required for any of this field work.

Please do not hesitate to contact me if you have any further questions in this regard.

Dave D.

Hello again. I was wondering if you two had a chance to look at this request and if you have an idea of when you can respond. It is critical that we have the information, but it does not have to be anything formal. Please let me know if you need anything else from me. If you want me to set up a quick telecon to discuss and answer any questions, I'd be happy to do that as well.

Thanks,
Marilyn

Subject: NBH/Aerovox Questions-

Hello Dave and Dave –

I am happy to hear that you will be continuing your longstanding relationship with the New Bedford environment. As you know, BC, on behalf of AVX, is working through a revision of the Phase III Remedial Action Plan for the Aerovox property. In reviewing remedial alternatives, MassDEP has asked us to take into consideration your anticipated contemporaneous efforts on the harbor side. In order for us to do so, could you please provide us with your current plans and thoughts with respect to:

- The dredge prism (Do you have draft plans, volumes, any cross sections? What specific criteria will define the lateral extent and depth of the planned sediment and soil removal adjacent to Aerovox? What will be the north and south limits for this stage of the harbor dredging?)
- DNAPL management (Elaine provided us with the most recent sampling results, but have you mapped the extent of DNAPL under the river? Do you have plans to manage or remediate it as a separate phase from the sediment dredging?)
- Means and methods (Just in general terms – how do you plan to remove the sediment/soil/DNAPL? Do you have a particular sequence in mind?)
- Post-dredge finish (Will you be backfilling? How do you plan to finish the intertidal zone?)
- Ops requirements (What land based resources will you require in terms of amount of space, access, etc.?)

- Schedule (Can you provide your best estimate at this point in time for schedule, at least in broad strokes, e.g. target start and end dates, duration of excavation/dredging, time occupying the land side?)

It may be helpful to talk through my questions. If so, let me know when you are available for a call and I can send out an outlook invite.

Many thanks,
Marilyn

Marilyn - thanks for checking in but at this point in time we don't have any further information regarding your highlighted questions regarding dredging or removal of contaminated sediments adjacent to the Aerovox site (i.e., no dredge prism or limits of dredging have been established, no means and methods have been selected for removal, and no decision has been made on back-filling or the final condition of the inter-tidal zone).

Dave
